Pool information:

How heavy is Birth Pool in a Box when filled?

Pool Size	Weight Filled with Water (plus weight of mother)	Recommended max height of mother	Volume of water (80% full)
Mini	487kg / 1,017 lbs	6' / 182cm	480 litres

A solid floor is preferable, or putting the pool in the corner of a room with joists that are rot-free, where there is more support. **We cannot guarantee that your floor will support the weight of the birth pool.** You may want to get an inspection of your joists and floorboards from a wood preservation company, particularly if your house is old and you have not had such an inspection recently.
